Designed for the professionals, Astro is the most powerful LED followspot available on the market.

The power of the 200W led module is enhanced by a state of the art optical design which results in an outstanding light output and a perfect beam shaping at any angle.

Dimming is fast and accurate with a resolution of up to 512 steps controlled from a single channel through DMX/RDM signal or from a control knob positioned on the rear panel of the unit.

With a choice of two different colour temperatures, warm white at 3200K or cool white at 5600K, Astro is the obvious choice for all those applications where power supply is limited and running costs need to be significantly reduced.
